INITIAL INSTALLATION

ROUTINE OPERATION

MAINTENANCE

TROUBLESHOOTING

SPECIFICATIONS

Preface

Safety Instructions

- **MYLO does not replace adult supervision.**
- The connection to the pool unit should be consistent with all local and national wiring rules (electrical code).
- Only use the pool unit power supply cable supplied with the system.

	WARNING:
	A Ground Fault Current Interrupter (GFCI-USA) or a Residual Current Device (RCD-EUROPE) must be installed to protect your electric outlet and prevent any possible electric shock.

- MYLO offers a field view of 110° for a direct line-of-sight encompassing the entire interior of a rectangular or oval pool.
- MYLO operation is optimal in pools up to 10 yards long.
- Keep the pool water as clear as possible (consult with a pool service professional).
- Verify that the images retrieved from the cameras are clear and that details on the far end of the pool can be viewed clearly.
- MYLO is another layer of safety and does not replace other pool safety devices or measures required by local city/state/country laws.
- MYLO uses computer vision technology to detect drowning. Depending on various factors, some drowning events might not be detected.

MENU

INTRODUCTION

INITIAL INSTALLATION

ROUTINE OPERATION

MAINTENANCE

TROUBLESHOOTING

SPECIFICATIONS

- MYLO uses Wi-Fi to transfer alerts, warnings, and notifications, and images from the pool unit to your paired devices using secured servers in the cloud.
- Communication to the paired devices depends on the quality of the home Wi-Fi network, and could, on occasion, be degraded or slower depending on signal quality.
- The drowning detection function is not dependent on Wi-Fi communication. The alarms and indicators in the pool unit and home unit do not depend on the Wi-Fi network quality.
- The home unit must be plugged into a power outlet inside the house, as close as possible to the pool unit. Make sure the home unit can be clearly seen and heard inside the home at all times (e.g. when there is background noise, music, people talking, or working electrical appliances).
- The power cable provides low voltage (24V) to the pool unit, and can be safely used next to the pool
- Activating MYLO requires pairing it with a smartphone using the MYLO App (using the app is mandatory only for activating the system).
- Operating the system is prohibited when it is not immersed in pool water or when the water level is below the minimum mark. Running the system without water can result in processor damage, as it relies on water for cooling. Any damage is not eligible for warranty coverage.
- At night, if inner-pool lights or outside lights are on, MYLO can still rely on its high-resolution cameras. In total darkness, MYLO will not be able to monitor the Pool activity and Detect drowning.
- **ADULT SUPERVISION IS REQUIRED AT ALL TIMES.**

Disclaimers

- Using MYLO is subject to the acceptance of the “Terms of Use” and “Privacy Policy”.
- Setting up and installing MYLO indicates your acceptance of the “Terms of Use” and “Privacy Policy”.
- If you DO NOT accept the “Terms of Use” and “Privacy Policy” please contact us to arrange a refund and return shipment.
- Activating MYLO requires pairing it with the MYLO app (using the app is mandatory only for activating the system).

NOTE:

The shape and position of the pool may effect system performance. Verify that the pool shape is suitable and that the pool unit is installed in the proper place, see [Mounting the Docking Station](#).

System Layout

MYLO is programmed to detect people, their position and motion, both in and around the pool. MYLO analyzes videos captured by cameras above and underwater. When MYLO detects a near drowning event, an alarm is generated. MYLO includes the following:

- [Pool Unit](#) (1): mounted on a corner of the pool, and is connected to a low voltage power supply. It includes video cameras, and generates alerts according to the scenario identified in the pool (see [Detection Scenarios](#)). The pool unit transmits alerts to the home unit (2) and to the mobile device (3) as needed.
- [Home Unit](#) (2): connected to a power outlet in the house, it communicates with the pool unit over RF (direct) communication, and provides audio and visual indication of the alerts received from the pool unit.
- [Mobile Application](#) (3): the MYLO mobile application, installed on a mobile device (3), provides alerts, system status notifications and remote monitoring.

TROUBLESHOOTING

SPECIFICATIONS

Indicators and Buttons

The side indicators (1) provide visual indications of the different scenarios in the pool. See [Detection Scenarios](#) for more information.

The upper indicators (2) are usually off and will turn red only when signs of drowning are detected. In this case, the alarm (4) will sound.

The dismiss alarm button (3) has the following operations:

- **Dismiss Alarm:** short press up to 5 seconds to silence the alarm (in case of a false alarm).
- **Reset:** press and hold for 5 seconds to reset the system.

MENU

[INTRODUCTION](#)[INITIAL INSTALLATION](#)[ROUTINE OPERATION](#)[MAINTENANCE](#)[TROUBLESHOOTING](#)[SPECIFICATIONS](#)

Power Supply

The pool unit includes:

- **DC IN (1)** –power supply cord inlet
- **Power Supply Cord (2)** - provides low voltage (24V) to the pool unit, and connects to a water safe outlet that provides 110V/220V

WARNING:

The system does not work without a connected power supply.
Keep the system connected at all times.

MENU

INTRODUCTION

INITIAL INSTALLATION

ROUTINE OPERATION

MAINTENANCE

TROUBLESHOOTING

SPECIFICATIONS

Docking Station

The docking station is mounted on a corner of the pool, (see [Selecting the Mounting Position](#)) and serves as a base for the pool unit. After first installation of the docking station (see [Mounting the Docking Station](#)), the pool unit can be installed or removed quickly. The docking station includes the following:

- **Docking Station Base (1)** - attached to the surface with two screws.
- **Base Plate Cover (3)** - covers the screws.
- **Screws (2)** - two screws to secure the docking station to the selected corner of the pool.

MENU

Home Unit

The home unit is plugged into a power outlet inside the user's home and includes the following:

- **Plug (1)** – connects to a power outlet inside the house.
- **Pool Activity Indicator (2)** – provides visual indication of the different scenarios in the pool, see [Detection Scenarios](#).
- **LED Indicators (3)** – provide indication of the system operation - connectivity, power, and visibility, see [Home Unit Indicators](#).
- **Buzzer (4)** – provides auditory indication of different scenarios in the pool, see [Detection Scenarios](#).

MENU

Home Unit Indicators

Water Visibility Indicator (1)

The water visibility indicator (1) provides the following indications of water clarity:

- **Steady green** – clear water
- **Steady yellow** – there is some visibility degradation
- **Steady red** – there is significant visibility degradation

Communication Indicator (2)

The communication indicator (2) provides the following indications of connectivity:

- **Steady blue** – the pool unit is connected to the Internet
- **Blinking blue** – no Internet connection in the pool unit

Pool Unit Power Indicator (3)

The pool unit indicator (3) should always appear steady green indicating power is supplied to the pool unit.

MENU

Mobile Application

The **MYLO by Coral Smart Pool** mobile application is available on the Google Play Store and on the Apple App Store.

The mobile application receives alerts and notifications from the MYLO device.

The mobile application allows the user to retrieve images of the pool, dismiss alerts, and changing settings (regarding alerts and privacy preferences).

See details in [Mobile Application Operation](#).

NOTE:

The first to install the app and pair MYLO with its phone will be the administrator, and will be the only one able to change the system settings.

Initial Installation

This chapter provides installation instructions and includes:

- [Opening the Box](#)
- [Selecting the Mounting Position](#)
- [Selecting the Mounting Orientation](#)
- [Mounting the Docking Station](#)
- [Inserting the Unit into the Docking Station](#)
- [Connecting the Unit to Power](#)
- [Connecting the Home Unit](#)
- [Downloading the MYLO Application](#)

MENU

[INTRODUCTION](#)[INITIAL INSTALLATION](#)[ROUTINE OPERATION](#)[MAINTENANCE](#)[TROUBLESHOOTING](#)[SPECIFICATIONS](#)

Opening the Box

The MYLO package includes the following:

	DESCRIPTION	QTY
	Pool Unit	1
	Home Unit	1
	Docking Station and Plastic Cover	1
	Power Cord	1
	Accessories Pack	1
	Quick Start Guide	1

MENU

Selecting the Mounting Position

Select the mounting position according to the following guidelines:

- Pool size and dimensions comply with system requirements (see [Coral website](#)).
- Camera line of sight covers the entire pool area (the camera has a field of view of 110°).
- Distance between the home unit and the pool unit should not exceed 50 yards.
- The docking station mounting screws should be anchored. For more information, see [Mounting the Docking Station](#).
- The pool water level should reach at least the minimum mark on the underwater tube once it is inserted into the pool.
- Do not install MYLO above or below pool stairs, as they may cause the camera's view to be obstructed.

NOTE:

For some pool shapes, there may be blind spots that MYLO can not cover, as demonstrated in the pictures on this page.

[TROUBLESHOOTING](#)
[SPECIFICATIONS](#)

Selecting the Mounting Orientation

The docking station must be mounted, depending on pool size, in the best location for drowning detection. The selected location must have a field of view of 110°, and a pool edge ready for drilling and fastening two mounting holes. Select one of the following mounting orientations:

- For a pool that has a round or straight edge (1).
- When mounting the unit on the corner of the pool, use the straight mounting (2). If the surface of the pool's edge is not conducive for drilling of the two holes, use the rotated mounting option (3).

ROUND OR STRAIGHT WALL

CORNER MOUNTING (STRAIGHT)

CORNER MOUNTING (ROTATED)

MENU

Mounting the Docking Station

After the optimal location for the pool unit has been chosen, perform the following to install the docking station:

- Place the docking station on the selected wall of the pool that has a 110° field of view.
- Verify that the metal vertical part (3) touches the inner wall of the pool.
- Mark the location of the screws (1).
- Drill two 8mm ($\frac{5}{16}$ ") holes (2).

NOTE:

Images here are for illustration only and depict the installation of the docking station in the corner of the pool.

Mount the unit according previous pages (see [Selecting the Mounting Position](#)).

MENU

[TROUBLESHOOTING](#)
[SPECIFICATIONS](#)

Inserting the Unit into the Docking Station

- A. Take the pool unit out of the package.
- B. Insert the lower part of the unit (2) into the docking station grip (4).
- C. Gently lower the pool unit until the grip (5) catches and holds the grip marks (1).
- D. Insert the pool unit pin (3) according to straight or rotated docking position. For straight mountings, the pin is inserted into the central hole (6). For rotated mountings, the pin is inserted into one of the two external holes (7), see [Mounting the Docking Station](#).

MENU

Connecting the Unit to Power

- A. Insert the power cord into the pool unit connection (1) and plug the other end into a water protected power outlet.
- B. The side indication LEDs (2) will start blinking white. After 30 to 60 seconds the LEDs will turn off for a few seconds and then will start blinking purple, indicating that the system is waiting to be activated.

NOTE:

The system will be activated only after installing the MYLO mobile application and accepting the Terms of Use. Once the system turns to active the LEDS will change from purple to green.

[SPECIFICATIONS](#)

Water Level

The water level in the pool must reach the water level mark (1) on the tube.

NOTE:

The water level is important to ensure the optimal performance of the system's processor and underwater camera. If the minimal water level is not met, add water to the pool. If for any reason this is not possible, contact Coral Smart Pool.

MENU

TROUBLESHOOTING

SPECIFICATIONS

Connecting the Home Unit

To install the home unit, plug it into a power outlet inside the house, as close as possible to the pool unit. The distance between the two units should not exceed 50 yards.

Once the home unit is plugged in and the pool unit is operational, the following indications occur:

- A. System Start-Up – all LEDs blink in all colors and the buzzer (2) emits a short beep.
- B. Once the pool unit and home unit are synchronized, the pool activity indicator (1) will be synchronized with the pool side LEDs.

Downloading the MYLO Application

Download and Install the **MYLO by Coral Smart Pool** mobile application from the Google Play Store or Apple App Store. Follow the installation and pairing instructions on the application. For more information, see [Mobile Application Operation](#). To activate the system, it is mandatory to install the app. Later it can be uninstalled. For full system functionality, using the app is encouraged. The first user to install the app and pair MYLO with their phone will be the administrator and the only one able to change the system settings.

Routine Operation

Overview

This section reviews the tasks associated with operating MYLO, and includes:

- [Detection Scenarios](#)
- [Mobile Application Operation](#)

NOTES:

- Alerts on the mobile device depend on the strength of the network communication. When the Wi-Fi signal is unsteady or weak, you may not receive timely alerts and/or notifications.
- Never rely solely on alerts on the mobile device.

Detection Scenarios

MYLO displays the following indicators to report the identified pool activity:

- Pool activity indicator on the pool unit (6) and on the home unit (1).
- Buzzers on the pool unit (5) and on the home unit (3).
- Additional red light - only activated in drowning events (2).
- Mobile app (4).

When MYLO is operational it can identify each of the following scenarios:

- [Pool Area is Unoccupied](#)
- [Entrance To The Pool Area/Entrance To Pool](#)
- [Normal Pool Use](#)
- [Drowning Suspicion](#)
- [Drowning Alert](#)
- [Drowning Critical Alert](#)

MENU

[INTRODUCTION](#)
[INITIAL INSTALLATION](#)
[ROUTINE OPERATION](#)
[MAINTENANCE](#)
[TROUBLESHOOTING](#)
[SPECIFICATIONS](#)

Pool Area is Unoccupied

- **Scenario description** – MYLO is operational and detects the absence of people in the pool or in the pool area.
- **Indications** – pool activity indicator blinks green slowly and the buzzer is silent.

Entrance To The Pool Area/Entrance To Pool

- **Scenario description** – MYLO detects entrance to the pool area, or entrance into the pool.
- **Indications** – pool activity indicator blinks green quickly, buzzers emit a single beep, and a notification with an image of the pool is sent to the mobile device. The pool activity indicator continues to blink quickly for the duration that it detects someone in, or around the pool.
- In the app settings, you can select whether you want the system to notify and beep upon entrance to the pool area, and upon entrance to the pool water.

Normal Pool Use

- **Scenario description** – MYLO detects presence of at least one person in the pool or its surrounding area. No detection of drowning signs.
- **Indications** – pool activity indicator blinks green quickly.

NOTE:

A beep sound will be emitted on entrance to pool area or pool, **only** if it has not been occupied for at least 5 minutes prior.

MENU

INTRODUCTION

INITIAL INSTALLATION

ROUTINE OPERATION

MAINTENANCE

TROUBLESHOOTING

SPECIFICATIONS

Drowning Suspicion

- **Scenario Description** – MYLO detects a person at risk of drowning for about 10 seconds . If signs of drowning disappear, status changes to [Normal Pool Use](#).
- **Indications** – pool activity indicator and the extra red light blink quickly, buzzers sound an alarm, a notification and an image of the pool is sent to the mobile app.
- **Alert Dismiss Options** – the Dismiss button on the pool unit, see [Indicators and Buttons](#) and via the mobile app, see [Teaching the System](#). In the app settings you can select whether the system will start the siren at this early stage, or only if the suspected event lasts 10 more seconds.

Drowning Alert

- **Scenario Description** – MYLO detects a person at risk of drowning for additional 10 seconds. If signs of drowning disappear, status changes to [Normal Pool Use](#).
- **Indications** – pool activity indicator and the extra red light blink red quickly, buzzer sounds a louder siren, a notification and an image of the pool is sent to the mobile app.
- **Alert Dismiss Options** – the Dismiss button on the pool unit and via the mobile app.

Drowning Critical Alert

- **Scenario Description** – MYLO detects a person at risk of drowning for an additional 10 seconds.
- **Indications** – pool activity indicator and the extra red light blink quickly, buzzer sounds the loudest siren, a notification and an image of the pool is sent to the mobile app.
- **Alert Dismiss Options** – the Dismiss button on the pool unit and via the mobile app.

MENU

Mobile Application Operation

This section provides an overview of the MYLO mobile application, and includes:

- [Downloading and Installing the App](#)
- [Terms of Use Screen](#)
- [Screen Overview](#)
- [Notifications and Alerts](#)
- [Teaching the System](#)

Downloading and Installing the App

- Using a mobile device, search for **MYLO by Coral** or **MYLO by Coral Smart Pool** in the Google Play store or the Apple App Store.
- Press **Install**.
- Allow the app to send notifications. Otherwise, alerts will not be received on the mobile device.
- Allow the app to access the camera in order to scan the QR-code.
- Follow the installation instructions. You will be asked to enter your Google or Apple ID, to scan your system's unique ID QR-code (found in the Quick Start Guide), and configure the home Wi-Fi. You will be asked to confirm the Terms of Use and Privacy Policy (see next page).
- After installation and pairing is complete, you will be able to see images from the two system cameras. Click the **Refresh** icon to see an updated image. See details in [Screen Overview](#).

MENU

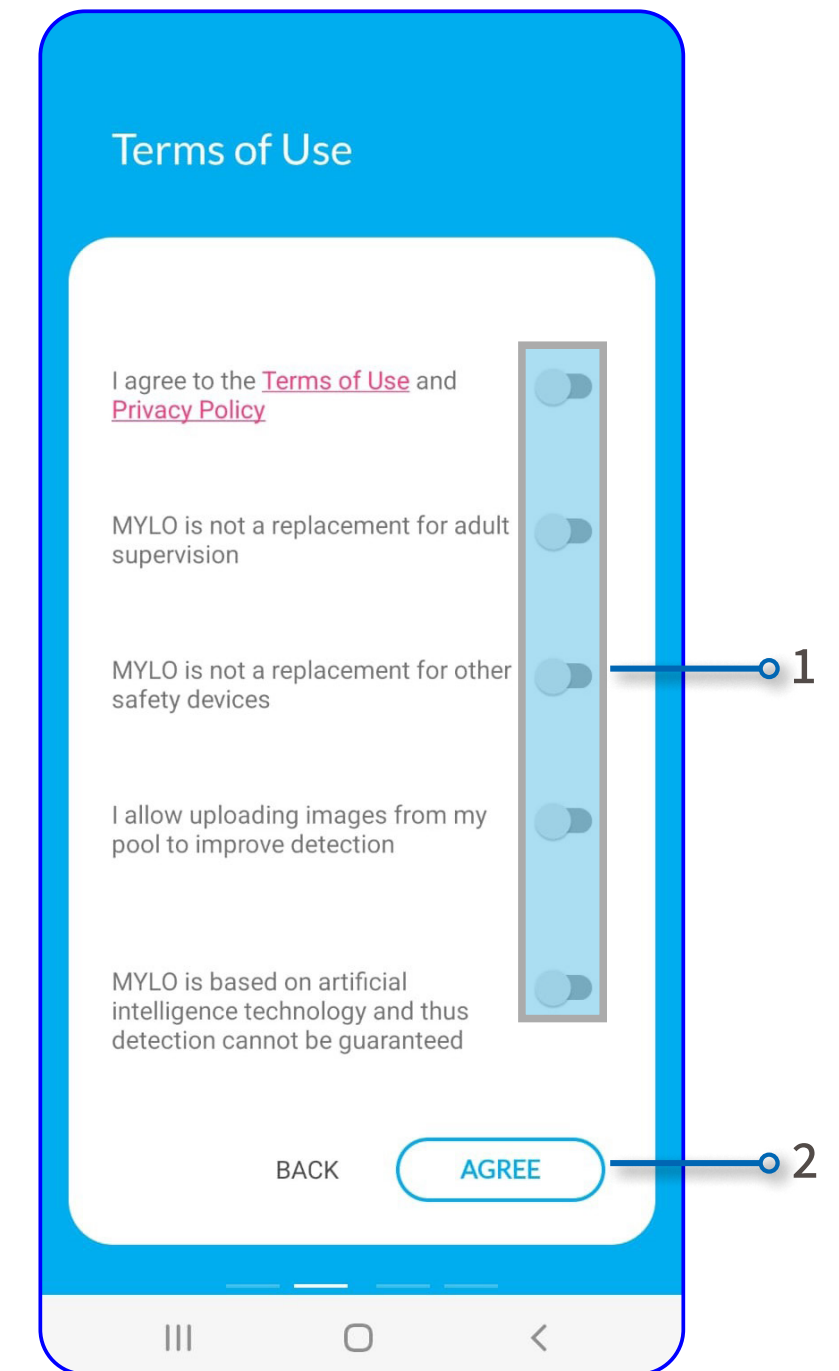

[INTRODUCTION](#)[INITIAL INSTALLATION](#)[ROUTINE OPERATION](#)[MAINTENANCE](#)[TROUBLESHOOTING](#)[SPECIFICATIONS](#)

Terms of Use Screen

- A. As part of the installation process, you will need to accept the Terms of Use.
- B. Confirm reading of the Terms of Use by selecting each toggle button on the screen (1).
- C. Tap **AGREE** (2).

	NOTE:
	It is not mandatory to select to allow "using images/videos to improve detection".
	NOTE:
	MYLO will not begin working until all terms and disclaimers are acknowledged within the mobile app.
	NOTE:
	The first to install the app and accept the terms will be the MYLO administrator. Others can install the app and pair to MYLO, but the administrator will need to confirm by a code they will receive. Only the administrator will be able to change settings for alert preferences and privacy issues.

Screen Overview

The main screen of the app includes the following:

- **Menu Button (1)**
- **Visibility (2)** – displays the status of the pool water clarity
- **Refresh Button (3)** – refreshes the app to display the most current underwater and above water images

Press the **MENU** (1) button to display the menu and choose one of the following options:

- Change settings
- Pair with another device or system (in case you have a large pool and purchased more than one system). See [Installing Multiple MYLO Systems](#) for more information.
- Change Wi-Fi settings
- Review privacy policy and terms of use
- About the App (4) - Links to information about the MYLO system

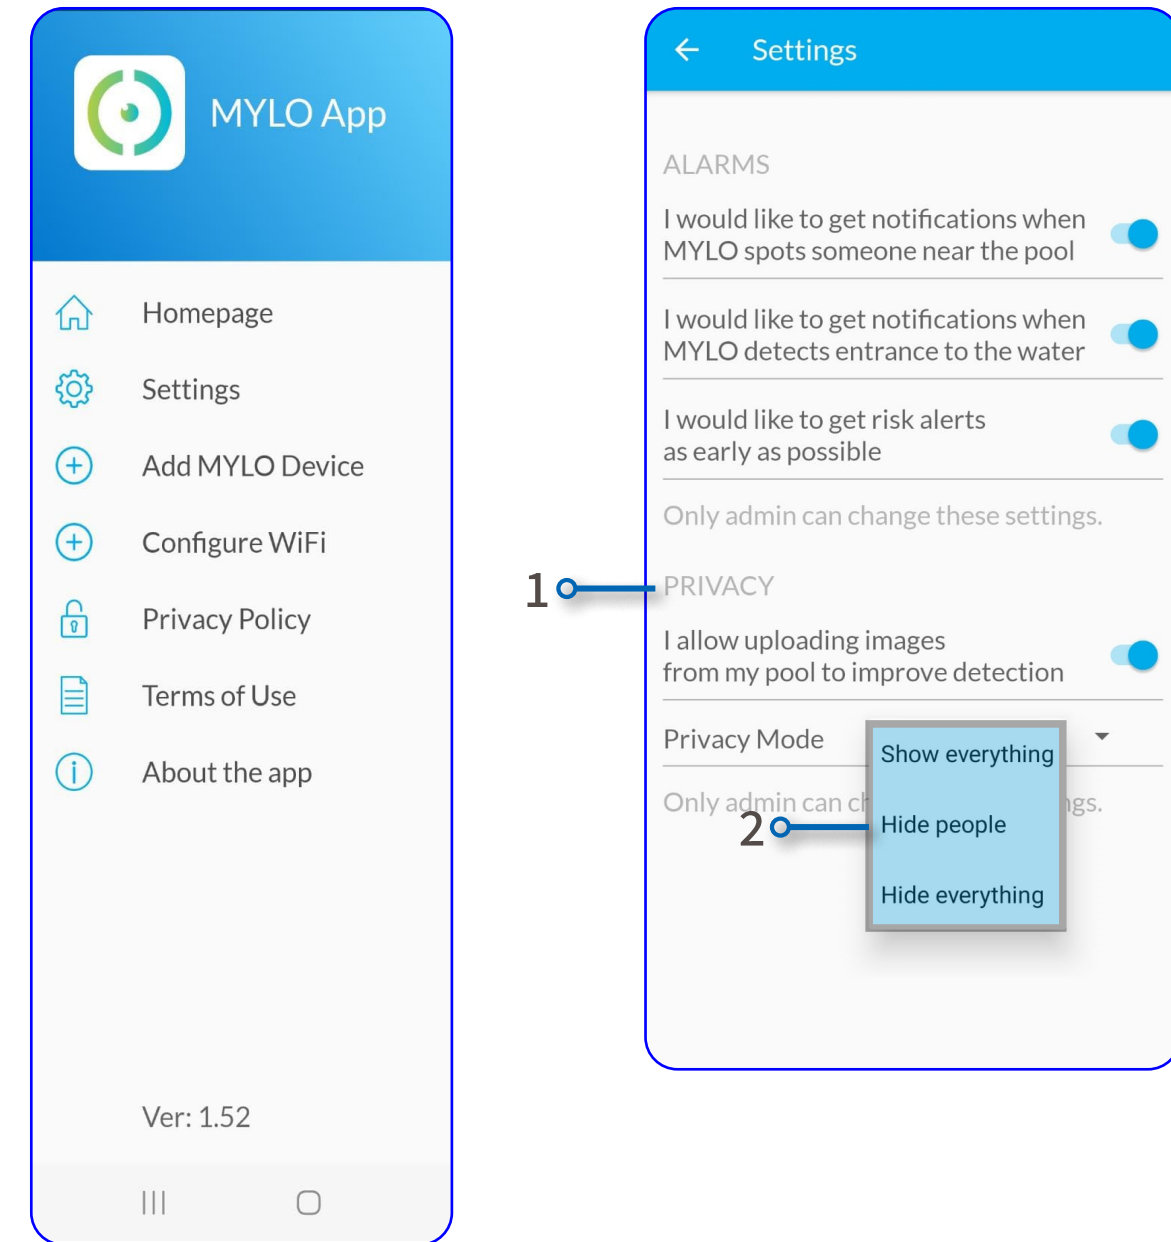

MENU

Settings Screen

In the Settings Screen, the administrator can change the settings for alerts and notifications, and regarding privacy issues. Other users have view-only access to the settings.

In the **Privacy** section (1) , the administrator can select the following privacy modes (2):

- Images from the system's camera will be uploaded and seen in the app 'as-is'.
- Images from the system's camera will hide detected people prior to sending the image.
- Images from the system's camera will not be sent to the app.

MENU

Notifications and Alerts

When the pool unit detects a person's presence or a drowning scenario (see [Detection Scenarios](#)), the mobile device receives an alert. Pressing the alert will open the app's screen, and images corresponding to the alarm will appear.

Teaching the System

MYLO is programmed to detect drowning situations and to ignore the detection of objects and non-drowning situations. Each pool has unique elements and MYLO can learn and adjust to the specific elements of the pool it is installed in. During the first few weeks of system operation, MYLO might be confused by such elements and generate more false alarms. These false alarms are quickly reduced and nearly disappear thanks to the ability of the system to learn what triggers false alarms.

How it Works

When receiving an alert, the object that generated the alarm is marked on the image with an ellipse. Refer to following buttons:

- **Mute (3)** – tap to silence the alarm without teaching the system to ignore similar objects in the future. Use this option when there is a person in the marked ellipse (1) but there is absolutely no drowning risk (e.g., someone is diving and appears to be drowning but it is certain that they are not at risk).
- **Mute and Teach (2)** – tap to silence the alarm and teach the system to further ignore similar scenarios in the future. Use this option ONLY if you are sure there is no person or body part in the marked ellipse (1).

MENU

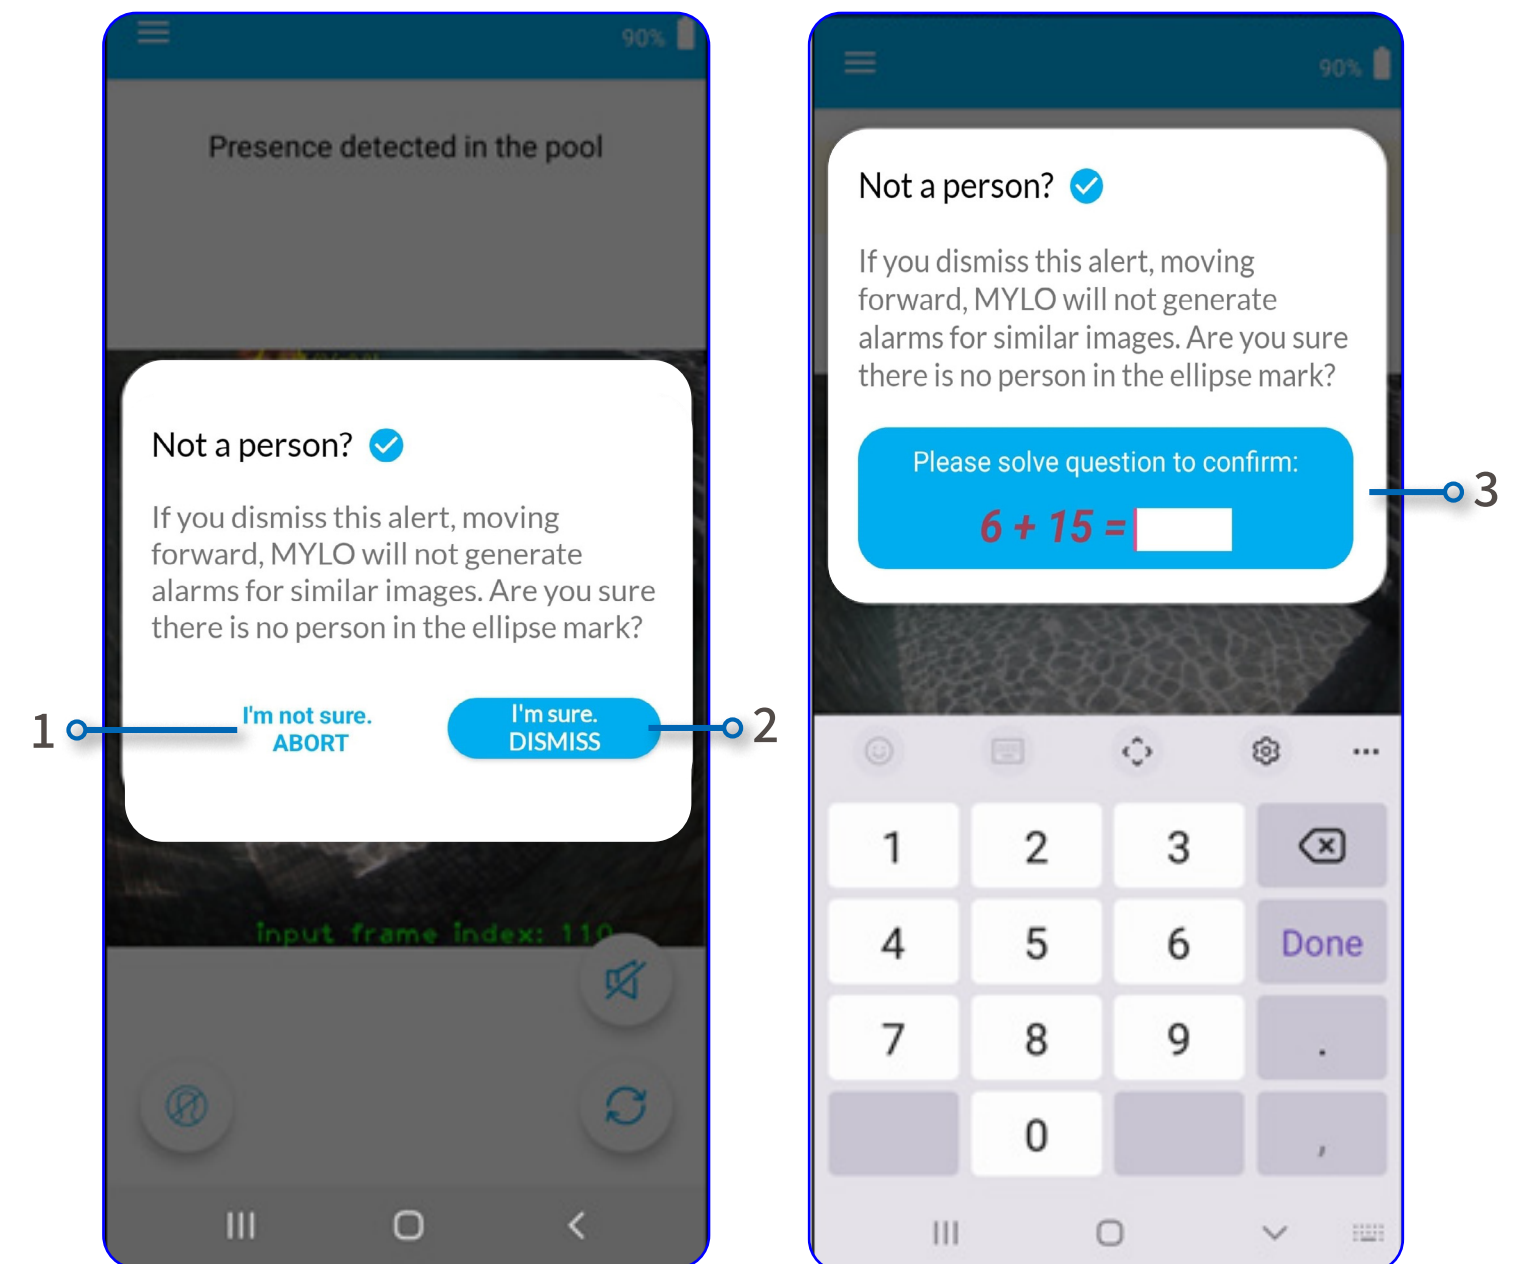

If you choose to tap on the **Mute and Teach** button, a confirmation message will appear on the screen with the following buttons to select:

- **I'M NOT SURE, ABORT (1)** – tap if you are unsure whether it is a false alarm, and you do not want the system to learn to ignore similar images in the future.
- **I'M SURE, DISMISS (2)** – tap if you are sure it is a false alarm. This action teaches MYLO to ignore any alarms generated from similar images in the future. If this option is selected, you will be requested to solve a simple math exercise (3).

WARNING:

Do not dismiss or mute an alarm before verifying that there is no danger of drowning.

Storing the System

To store the pool unit:

- A. Disconnect the power cord.
- B. Lift the pool unit off of the docking station. You will need to detach the docker holders in one hand and pull the unit gently upwards with the other hand.
- C. Verify that the pool unit is dry and clean.
- D. Cover the end of the underwater tube with a protective cover.
- E. Place the pool unit, the power cord, and the home unit in the original package.
- F. We recommend leaving the docking piece mounted. For a long storage period, it is the user's choice to uninstall and pack the docking piece.

Installing Multiple MYLO Systems

Using multiple MYLO systems should be considered if:

- If you have more than one pool
- If you have one large pool (longer than 10 feet)
- If you have a non-standard shaped pool

Multiple systems can use the same MYLO mobile app. To set up the MYLO app for multiple systems, in the app menu, select **Add MYLO Device**, and follow the instructions.

You will be asked whether the system is in the same pool as systems that are already paired in the app. It is important to select the correct answer. If the systems are in the same pool, they are configured to be synchronized.

	NOTE:
	Each system should use its own paired home unit ,even if the systems are in the same pool.

Troubleshooting

Indication and Resolution

INDICATION	DESCRIPTION	RESOLUTION
Water visibility indicator on the home unit is steady yellow.	There is some degradation in visibility that can be caused by a water clarity issue or from something partly obscuring the camera view.	Check water clarity, see Pool Water Clarity .
Water visibility indicator on the home unit is steady red.	There is a significant visibility problem caused by water clarity issue or by something obscuring the camera view.	Check water clarity, see Pool Water Clarity .
Communication indicator on the home unit blinks blue.	No communication between the pool unit and the mobile application.	1. Check Wi-Fi configuration in the mobile app. 2. Reset your Wi-Fi router.
All home unit LED indicators blink red simultaneously.	There is no communication between the pool unit and home unit.	1. Place the home unit closer to the pool unit. 2. Check if the pool unit is powered on and well connected. 3. Disconnect and reconnect the power supply. If the issue persists, contact customer support.
All home unit LEDs are blinking red alternately.	Operational fault, such as an analytical fault, or system start-up failure.	Press the pool unit button for 5 seconds to reset the system. If the issue persists, contact customer support.

Compliance with FCC Rules

MYLO complies with FCC rules Part 15.

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- A. Reorient or relocate the receiving antenna.
- B. Increase the separation between the equipment and receiver.
- C. Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- D. Consult the dealer or an experienced radio/TV technician.

CANICES-3 (B) / NMB-3 (B)

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de classe B est conforme à la norme canadienne ICES-003.

Coral Smart Pool has not approved any changes or modifications to this device by the user. Any changes or modifications may void the user's authority to operate the equipment.

Mobile Device RF Exposure Statement

Mobile Device definition: Mobile: (§2.1091) (b) A mobile device is defined as a transmitting device designed to be used in other than fixed locations and is to be used in a way that a separation distance of at least 20 centimeters is maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons.

Per §2.1091d(d)(4): In some cases (for example, modular or desktop transmitters), the potential conditions for the usage of a device may not easily allow device classification as either Mobile or Portable. In such cases, applicants are responsible for determining minimum distances for compliance for the intended use and installation of the device based on evaluation of either the specific absorption rate (SAR), field strength, or power density, whichever is most appropriate.

Statement in UM:

RF Exposure

- For FCC : This device is only authorized for use in a mobile application. At least 20 cm of separation distance between the device and the user's body must be maintained at all times.
- For IC: La distance entre l'utilisateur et de produits ne devrait pas être inférieure à 20cm.
